Hannah Roberts

Hannah Roberts (née Macleod) has over 15 years experience and enjoys a good local reputation, having worked in the area since 2004. She has a Bachelor of Podiatry from the University of South Australia.

Hannah can help with corns and calluses, painful, difficult or ingrown toenails and veruccae. She also has had a lot of experience in musculoskeletal problems and can help treat painful feet and legs, plantar fasciitis, neuromas and tendonopathies that may be associated with the way you walk and stand. Treatment may include stretches, exercises, footwear changes, steroid injections and orthotic devices.

Hannah understands the challenges of working with younger patients, having two small children of her own. She is happy to see children of any age - her youngest ever patient was just a few hours old!

Hannah is registered with the HCPC and is a member of the Society of Chiropodists and Podiatrists as well as being a committee member of the Cambridgeshire branch.

Hannah will soon be registered with BUPA. Most insurance cash back schemes work with an HCPC registered Podiatrist but we suggest that you check first.

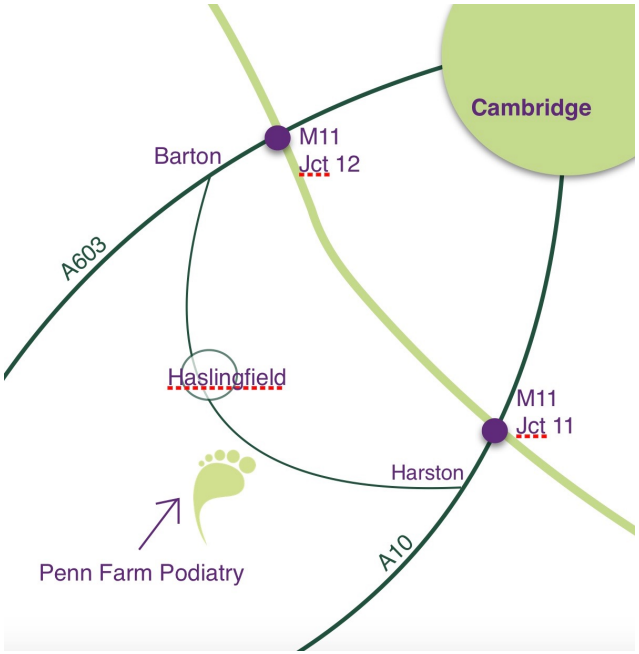
About Penn Farm Podiatry

Penn Farm Podiatry is located at Penn Farm Studios, a collection of converted farm buildings in pleasant rural surroundings between Haslingfield and Harston.

We are based within Penn Farm Physiotherapy, which is particularly helpful for musculoskeletal patients requiring a multidisciplinary approach.

There is plenty of parking and the building and lavatory are wheelchair friendly.

***** We now have online booking *****



PENN FARM PODIATRY

Penn Farm Podiatry is located just six miles south west of Cambridge with plenty of parking. We offer a quality, professional and friendly service to all ages, with particular emphasis on getting the basics right, including infection control and patient confidentiality. Treatment is tailored to specific needs with a pragmatic and flexible approach - we will work with you to create an individual plan that works best for you and your feet.

Fees and Services

Standard Consultation **£40**

20-30 minutes. These appointments cover almost anything foot related! Sometimes, if there is not enough time - for example if you need a biomechanical assessment, a follow up appointment will be booked to complete assessment and treatment.

Short Consultation **£26**

10 minutes. These brief appointments are booked by the podiatrist for some types of reviews.

Biomechanical Assessment **£70**

45-60 minutes. An in-depth assessment of your foot mechanics, which can involve a gait analysis, muscle strength testing and assessing flexibility. Please bring with you any previous orthoses or insoles as well as any specific footwear - for example walking boots, sports footwear, dance or work shoes. You may be issued pre-fabricated orthoses, temporary orthoses or insoles, be cast for custom made devices or given footwear or exercise advice. Video gait analysis will soon be available.

Orthoses and Insoles

Temporary orthoses		£5
Simple insoles	from	£45
Pre-made or off-the-shelf orthoses		£50
Custom made orthoses	from	£190

Fees and Services

New Patients

Most new patients book a standard appointment. If you are specifically interested in a biomechanical assessment, then you can book this as your first appointment.

In order to complete a full assessment, you will be asked about your medical history so please bring with you a list of medications.

Children and young people

Lots of children come to see podiatrists. While many of their problems are similar to the adult foot, they do also have their own range of unique issues. That said, not all young feet require treatment and after careful assessment we will discuss options and advise what is appropriate.

Steroid injections

Hannah is qualified to administer corticosteroid injections. Steroid injections can be very helpful when conservative treatment, such as orthoses, haven't worked. Most commonly injections will be for a morton's neuroma or plantar fasciitis. This will cost £10 in addition to the appointment fee.

Nail surgery	from	£230
Verucca needling		£200

What is a Podiatrist?

A Podiatrist is a highly skilled health professional who is trained to prevent, diagnose, treat and rehabilitate abnormalities of the feet and lower limbs.

We prevent and correct foot deformities, reduce pain, treat infections and keep people as active as possible.

What is the difference between a "chiropodist" and a "podiatrist"?

Well, technically they are the same thing and we are registered with the HCPC as Chiropodists/Podiatrists. Most countries no longer use the term "chiropodist", and the change in title reflects that our scope of practice extends beyond "just" corns and toenails (although we are still pretty good at that too).

Items for sale

We sell a variety of products to aid our treatment. Currently we stock foot creams, long handled shoe horns and silicone devices but our range is expanding and we will often order in requested items.
